Chapter 1

Representing MARS in OGIT ontology

Overview

All definition in the *ogit/MARS* namespace aim to have a proper modelling of **MARS Nodes** as graph data.

Those definitions will obsolete

- **MARS XML Schema**
- Modelling of MARS nodes in the **Automation NTO**

Transition to MARS NTO

Entity Mappings

instead of just one entity type *ogit/Automation/MARSNode* there are now four:

- *ogit/MARS/Application*
- *ogit/MARS/Resource*
- *ogit/MARS/Software*
- *ogit/MARS/Machine*

Attribute Mappings

general remarks:

- */NodeID*, */ID* is supposed to be stored in *ogit/_xid* (user provided indentifiers)
- */NodeName* is mapped to *ogit/name*
- */NodeType* is mapped to *ogit/_type* (one of the four entity types)
- the following attributes from *ogit/Automation/MARSNode* become obsolete:

- ogit/Automation/marsNodeFormalRepresentation
- ogit/Automation/marsNodeType (replaced by ogit/_type)
- a few attributes from ogit/Automation NTO have been reused
- attributes from SGO or other NTOs have been reused when appropriate
- the following attributes were added without having a corresponding definition in MARS XML Schema:
 - ogit/url for "Software" and "Resource"
 - ogit/serialNumber for "Software"
 - ogit/Automation/lifecycle
- only a subset of attributes defined by MARS XML Schema is mapped to *ontology defined attributes*. All others will remain "free attributes"
- the following *classification attributes* have a predefined list of allowed values:
 - ApplicationClass, ApplicationSubClass
 - ResourceClass
 - MachineClass
- the values of *classification attributes* for Software MARS nodes are not validated, yet

The full mapping is defined here.

Verb Mappings

- ogit/Automation/MARSNode -ogit/relates-> ogit/Automation/MARSNode is replaced by:
 - ogit/MARS/Application -ogit/dependsOn-> ogit/MARS/Resource
 - ogit/MARS/Resource -ogit/dependsOn-> ogit/MARS/Software
 - ogit/MARS/Software -ogit/dependsOn-> ogit/MARS/Machine
- most relationships for ogit/Automation/MARSNode are also allowed for ogit/MARS/*:
 - everything from the ogit/ServiceManagement NTO
 - relations to objects with secondary data: ogit/Timeseries, ogit/Attachment, ...
 - when appropriate the new mappings are only for specific MARS nodes, e.g. only ogit/MARS/↔ Application
- some relationships for ogit/Automation/MARSNode were not duplicated for ogit/MARS/* (at least not yet):
 - most relationships between ogit/Automation/MARSNode and other entities from ogit/↔ Automation NTO

Module Documentation

2.1 Entities

2.1.0.1 ogit/MARS/Software

Vertices of this type are the 'S'-nodes in the MARS model. 'S' stands for 'Software' and those nodes form the second lowest layer in the A-R-S-M layer model. It's up to the user whether it will model a specific instance of a software (linked to just one 'Machine' node) or several identical instances (then the 'Software' node will be linked to several 'Machine' nodes)

2.1.0.4 [ogit/OSLC-crtv/ServiceInstance](#)

A Service Instance is the representation of a service offering that was selected by the customer and then instantiated for that specific customer. Service Instances are supported by definite and measurable warranties or guarantees that the expected level of service/value will be met. Instances of the resource carry exposure from the group that is responsible for supporting the offering externally to the group that is utilizing the offering. It is common to group or nest instances together to form a service instance hierarchy. This resource definition does not represent the individual processes and/or activities that comprise an overall service except in the case where such processes are viewed as an independent service. In this condition, an instance of ServiceInstance would be created to represent the ServiceInstance of the process, then creating a hierarchy of ServiceInstances (to the containing Service↔ Instance).

2.1.0.6 [ogit/MARS/Application](#)

Vertices of this type are the 'A'-nodes in the MARS model. 'A' stands for 'Application' and those nodes form the highest layer in the A-R-S-M layer model. An 'Application' node groups 'Resource' nodes which form one business application.

2.1.0.16 ogit/MARS/Resource

Vertices of this type are the 'R'-nodes in the MARS model. 'R' stands for 'Resource' and those nodes form the second highest layer in the A-R-S-M layer model. A 'Resource' node groups 'Software' nodes. It's up to the user whether this grouping is used to group software instance of the same software (e.g. all instances of an Oracle RAC) or software instance of different softwares (functional grouping, e.g. 'persistence')

2.1.0.17 ogit/Asset

Assets represent a physical hold of a value and are situated in a location. Assets could correspond to one or more `ogit/Automation/MARSNode`'s and can be physical or virtual. Assets of a Service Provider include anything that could contribute to the delivery of a Service. Assets can have a type, for example: Management, Organisation, Process, Knowledge, People, Information, Applications, Infrastructure, Financial Capital.
