Module Documentation

1.1 Entities

1.1.0.1 ogit/Auth/Software

Vertices of this type are the 'S'-nodes in the MARS model. 'S' stands for 'Software' and those nodes form the second lowest layer in the A-R-S-M layer model. It's up to the user whether it will model a specific instance of a software (linked to just one 'Machine' node) or several identical instances (then the 'Software' node will be linked to several 'Machine' nodes)

1.1.0.3 [ogit/Automation/MARSNode](#)

Using this entity type to represent MARS nodes is deprecated. New applications should prefer the entity types from [ogit/MARS NTO](#).

IT Objects will be represented in MARS Modell with MARS nodes. The MARS model builds upon four basic types of objects with a single type of relationship. Basically the objects which are in fact called "nodes" represent both views - the business perspective and the technical view. The technical components are modeled in the machine and software layers while the application and resource layers describe the business view of the IT environment.
